

# Air Condenser

Available in single and double version

Air coolers can replace conventional water coolers in many chemical application processes. Such a conversion minimizes water consumption and saves money.

## Description

This air cooler is a patented development by the WWU Münster, which NORMAG sells and uses exclusively. It only works with air and does not require water. This results in various advantages compared to conventional water coolers and air coolers from other manufacturers.

## Benefits

- Saves water and prevents flooding
- Glass body is easy to clean
- Chemical and heat resistant
- Easy to clamp / hold
- Environmentally friendly product
- Quick amortization of the purchase price

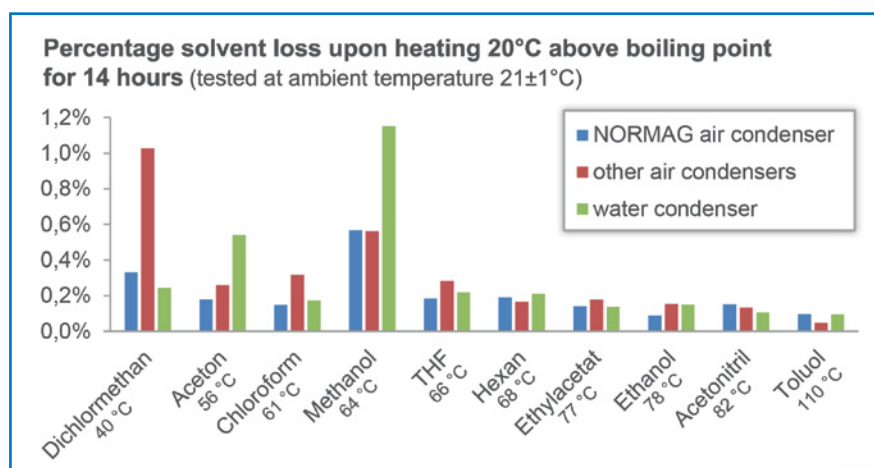

**SAVES WATER**  
PREVENTS FLOODING

## Comparative study

about solvent loss compared to alternative products

In a direct comparison, the air cooler from NORMAG shows a significantly lower solvent loss than other air coolers. This difference is particularly clear for shorter periods of use.
